## HOW WAS MAN MADE!

DeWitt Talmage and the Evolutionists.

He Places in Opposition Bible Truths and the Evolution Theories on the Origion of Species, and Speaks of the Survival of the Flitest.

New York, January 14 .- The subject of the Rev. T. DeWitt Talmage's ser-mon this morning was "Evolution, anti-Bible, anti-science, anti-common sense." His text was found in I Timethy, vi., 20: "O, Timothy, keep that which is committed to thy trust, avoiding oppositions to science falsely so called."

There is no contest, Mr. Talmage clations. The same God, who wrote the creatures that swim in sea, or fly that evolution is wrong in theory. by the hands of prophets on patchinent, wrote by the hand of storms on of four primal germs would have natural progress. Where is the said of the creatures that swim in sea, or fly that evolution is wrong in theory. the rocks. The best telescopes are owned by Christian universities. By whom was magnetic telegraphy discovered: By Professor Morse, an evanling together the continents? Cyrus W. Field, the Christian, Who discovered the anaesthetical qualities of chiroform, more than any other man that ever lived, giving relief to pain and turning back nine-tenths of the horrors of surgery? James Y. Simpson, as eminent for piety as for sea-I saw the universities of Edinand revelation there is an uncompro-

in the first place, up and down, out it is contradicted by science and brufalizing in its effects. I do not to-day argue that the Bible is true, or that it is in any way to be relied on as a trustworthy book. These are subjects for other Sabbaths; but I wish you to un-derstand that Thomas Paine and Voltaire and Hume no more disbelieved I say scientists I do not mean literary men who discuss this matter in essay or sermon, and without time for investigation look at it from this side or that. but I mean the men who through laboratories and aquariums and zoological gardens and astronomical observa-

## MILLS OBLIGED TO STOP.

Thousands of Hands Unemployed.

An Overproduction of the Coarser Fabrics and Southern Competition Said to Be the Cause of the Stoppages-Views Held by Prominent Manufacturers.

It is estimated that at least 10,000 looms and, probably 2.0 0.0 spindles are now idle in the cotton and woolen mills of this city and vicinity, in emsequence of the continued in trade. figures, but this estimate is the lowest Thursday, January 25. to give the of several made by well-informed gentiemen. At the usual rate of running these machines it means a total loss of work for from 5,000 to 6,000 operatives, while probably ten times as many are working on reduced wages or on shortened time. The depression is felt most severely in the business of producing the cheaper grades of cotton and woolen goods, and it is so general that as one of the largest mill-owners in the city said vesterday, "Everybody who can afford to close his mills is doing so." This gentleman said in a decided tone: "We have stopped our mills because it would not ay to keep them running. I do no know how long they will remain idle, but it will be until the price of labor decreases or that of our products ad-vances." This was said of a mill on which about one thousand operatives and probably about twice as many peo ple in their families depended for their daily bread. It could be duplicated in several sections of the city, and in every section there has been a material reduction either in wages or in the hours of labor, or both, within the past month, Some mill owners have closed their establishments for an indefinite time, ethers have found excuses for temporary stoppage in the anunal repairs which they are in no hurry to make; others still work spasmodically, being forced by businecessity to make up goods t as they can find sale for them, even at a loss; many have reduced their force by stopping mres, More Remons Comedians, More New Pearschuced Their force by stopping one or more sections, thus reducing their output, and marry all those still working run their milis only by light, which at this season of the year is equivalent to about three-quarters

All have the same story to tell, There has been an overproduction of these the effort to force on the market a profitably made. Cotton prints, ging-And all the commoner kinds of coaten and they ever were before in this city, and if consumers have not found it out before this it is because the retailers have cruse their own profits.

detestable ocracy, which Charles the South always presented for the Kingsley, after witnessing it himself, coarser kinds of cotton goods. Others, called shobocracy. Is it honest to pain however, say this is no, the principal off this old heathen notion as a mod- cause of the depression and douct whether it has any influence whatever.

European goods which are supposed to be somewhat finer than the American make, are enormous.

GOODS OF FOREIGN MAKE. The imports of ectton, silk and woollen goods, including ready made clothing, for the fiscal year ending June 30, 1882, amounted to \$112,063, 754, or considerably more than \$2,-000,000 a week, "every dollar of which," said a patriotic gentleman, "every dollar c might, could and should have been expended for equally good articles manufactured at home. If people would only get rid of the idea that there is comething extra good about foreign products there need be no depression in any branch of the textile industries of Philadelphia."

Nearly all the gentlemen who expressed their opinions to the reporter were confident that the present de-pression would not last long. They thought that the production had been diminished to an extent that must re lieve the market before very long, and the least sanguine of the country's pop-the rapid growth of the country's population would soon cause consumption to equal if not surpass the supply. In fact few of the manufacturers were found like the firm mentioned above to have drawn their fires, greased their machinery, discharged all their operatives, and cy. They were careful not to let their operatives go, but had everything ready to start at a day's notice whenever they thought the state of the market would permit them to do so. A few mills which took a holiday recess have started up already, but only a few; the others, which closed temporarily, have not finished making repairs.'
